Academic and Employment History

07/2021 –	Technical Manager, Optimal Pattern Correction, TSMC, San Jose, CA
08/2017 – 06/2021	Principal Engineer, Optimal Pattern Correction, TSMC, San Jose, CA
06/2019 – 12/2020	Visiting Scholar/Consultant, CCM, Flatiron Institute, New York, NY
08/2015 – 08/2017	Sr. Engineer, Optimal Pattern Correction, TSMC, San Jose, CA
01/2013 – 07/2015	NSF Postdoctoral Fellow, Mathematics, Stanford
09/2012 – 12/2012	Visiting Scholar, Courant Institute, NYU
08/2012	Visiting Scholar, Theoretical Systems Biology, Imperial College London
06/2012 – 08/2012	Assistant Research Scientist, Courant Institute, NYU
09/2007 – 05/2012	Ph.D., Computational Biology (Mathematics), Courant Institute, NYU
06/2010 – 02/2012	Intern/Consultant, Schrödinger, New York, NY
09/2003 – 06/2007	B.S. (with honor), Applied and Computational Mathematics, Caltech

Technical Summary

- Applied mathematics Ph.D. with broad training in computer science, statistics, biology, and chemistry
- Roughly three-stage career so far across both academia (3 years postdoc) and industry (8+ years)
- First, as an early graduate student, I started in mathematical biology and computational chemistry. Research highlights: mechanistic modeling of apoptosis and “trimer” theory for bistability²; automated all-atom protein crystal structure refinement³; algebraic methods for model selection of chemical reaction networks^{5,13}.
- Then during later graduate studies (with Leslie Greengard) and continuing through my postdoc (with Lexing Ying), I moved into scientific computing and numerical linear algebra, specifically fast direct solvers and other generalizations of the fast multipole method: $O(N)$ generalized LU decomposition for hierarchical matrices, e.g., for solving integral equations^{4,11,14} and PDEs^{12,18}; applications to chemistry⁶, physics⁷, and statistics¹⁶; open-source MATLAB software²²; $O(N \log N)$ butterfly factorization^{9,19} for high-frequency scattering and Fourier integral operators.
- Now I work in computational lithography and software engineering as a lead developer on TSMC’s in-house simulator for OPC/ILT/SMO: numerical methods, computational infrastructure, software design; optics theory^{24,25} and fast TCC²³; high-performance computing, CPU/GPU acceleration; computational electromagnetics, inverse problems, numerical optimization, machine learning.
- *Computing*: C, C++, CUDA, Fortran, Julia, \LaTeX , MATLAB, MPI, Octave, OpenMP, Python
- *Awards*: NSF graduate and postdoctoral fellowships, NYU dissertation award, Caltech merit award and research fellowship
- 20 peer-reviewed publications, 9 patents, 47 conference/seminar presentations, 8 open-source codes
- Google Scholar: 6gr2NYwAAAAJ (1000+ citations); ORCID: 0000-0001-5450-4966; GitHub: klho
